

## Learning Tools – Feelings Thermometer

Enabling children and teachers to articulate and explore collective emotional states

A learning tool co-designed by **edl** practitioners, teachers and parents, to help children learn about their own and others' feelings. Used every day, the feelings thermometer helps increase children's sensitivity to the needs of others and their sense of 'belonging' to the class group. It encourages children to express their feelings and discover what both supports and disturbs the wellbeing of others – collectively.

The feelings thermometer hangs in the classroom, giving members of a class or group the opportunity to explore and register the range of emotions, or perhaps levels of motivation, they are experiencing at any one time. Children place their own personal peg on a coloured 'feelings scale' that they have designed and constructed. The teacher is able to take simple 'readings' of the class during the day.

Especially designed for use in schools, the feelings thermometer is large-scale and made from smooth beech wood, with natural sisal rope all in a heavy canvas storage bag.

Included in the pack is a detailed 28-page book full of ideas, real-life examples and ways to work, guiding the teacher or learning support assistant through construction and use of the feelings thermometer.

The set contains 40 standard wooden clothes pegs and 40 wooden name discs (each 3cm dia.), and rope approx. L 2.45m. Simply thread the parts together and it is ready to hang.

Made up size H1.44m x W27cm.

Suitable for up to 40 school age children, from 4+, with adult assistance

Wood glue and coloured card not included.

Price **£55 (ex VAT and p&p)**
